超声波提取机组

本设备适用于中药、食品、饮料、含高油脂成分的植物。支持微压、热回流、渗透、多种工艺提取，可用于芳香油及精油成分的超声波提取。

设备特征

- 型号JWO-CSB-15KHz、20KHz、28KHz、30KHz、35KHz、40KHz、50KHz。
- 超声波系统由震动部分可调频率、功率密度、发射面积。在液体中传播能对物料表面进行清洗，“空化”超声波震动在液体中传播的声音波达到1个大气压时，其功率密度为0.35W/CM²，这时超声波的音波压强峰值就可达到真空或负压，此空洞非常接近真空状态，它在超声波压强反向达到最大时破裂。由于破裂而产生的强烈冲击就会将物体表面的污垢撞击下来。这种由无数细小的空化气泡破裂而产生的冲击波现象称为“空化”。
- 超声波提取使提取时间大大缩短3-5倍以上，没有过流、过热、报警系统，具有全自动频率跟踪功能，可靠性高的理想超声波提取设备。

Ultrasonic extraction unit

This equipment is suitable for traditional Chinese medicine, food, beverage, plants containing high oil content. It supports micro-pressure, heat reflux, infiltration, aromatic oil, and ultrasonic extraction of aromatic oil and essential oil components, etc.

Equipment features:

- Model JWO-CSB-15KHz、20KHz、28KHz、30KHz、35KHz、40KHz、50KHz。
- Ultrasonic system, with the vibration part supporting the adjustable frequency, power density and emission area, and being able to spread in the liquid, can clean the surface of the material. When the sound wave of "cavitation" ultrasonic vibration in the liquid reaches 1 atm, the power density is 0.35 W / CM². Then the ultrasonic wave pressure peak can reach the vacuum or negative pressure, this hole is very close to the vacuum state, which rupture when ultrasonic pressure reaches the maximum rupture. The strong assault caused by the rupture will crash down the dirt on the surface of the object. This shock wave, which is caused by the rupture of numerous small cavitation bubbles, is called "cavitation".
- Ultrasonic extraction greatly reduce the extraction time by 3 to 5 times. Our ultrasonic extraction unit with overcurrent, overheating, alarm system, and automatic frequency tracking function, is the highly reliable ideal ultrasonic extraction equipment.
